MUNAWIRUL HADI

SENIOR FRONTEND ENGINEER · REACT · TYPESCRIPT

Bandung, Indonesia | hadi.munawirul@gmail.com | heyhadi.github.io | github.com/heyhadi | linkedin.com/in/heyhadi

Open to senior frontend roles — remote, or relocation to Singapore, Australia, Japan, the Netherlands or Germany · Notice: 1 month

PROFESSIONAL SUMMARY

Frontend engineer with 5+ years in production. Top contributor and release manager for GetGo's React and TypeScript operations platform across three brands and three markets; lead code reviewer and mentor for the web team. Strongest where teams usually stall: migrations, deploy pipelines, dependency automation and incident response.

PROFESSIONAL EXPERIENCE

Fullstack Engineer

May 2022 – Present

GetGo Technologies (Singapore · Remote)

Car-sharing platforms (customer web app, operations and fleet systems) serving three brands — GetGo, Popcar and Zipzap — across Singapore, Malaysia and Australia.

- Release manager and top contributor for the Customer Management System (React, TypeScript, Redux), shipping on a three-week train to two brands in three markets behind release plans, QA checklists and sign-off gates.
- Lead code review for the web team and onboard and mentor new engineers; the branching, dependency and AI-coding standards I authored are used beyond the team.
- Built booking, billing and payment UI — data tables, multi-step validated forms, PayNow, bulk toll charging — and wrote the technical spec for the cross-border Drive to Malaysia programme.
- Build features for GetGo's customer-facing web app alongside the internal platforms.
- Led CMS modernization — React 16 → 18, Node 14 → 24 LTS, Bootstrap 4 → 5, CoreUI removal, Webpack → Vite spike — each behind a breaking-change audit and regression checklist.
- Built a Claude Code plugin (21 skills, 10 agents) that constrains AI-generated code across web, Android, iOS and backend; a before/after trial eliminated the regressions an unguided agent introduced.
- Designed Gitflow and a dual-brand deploy-by-tag pipeline on AWS Amplify, replacing the manual process behind a production misrouting; automated Dependabot upkeep from zero to ~25 merged updates a month.
- Led incident post-mortems (CMS auth outage, Amplify webhook misrouting) and the Shai-Hulud npm-worm and CVE response.
- Own two Svelte + TypeScript fleet and dealer apps; delivered two REST services solo in Go and C#/.NET.

Backend Developer

Apr 2021 – Apr 2022

PT Majapahit Teknologi (Jakarta, Indonesia)

- Designed relational schemas and built the Node.js/Express REST APIs for OSS-RBA, Indonesia's national business-licensing platform, on assignment at BKPM.

OPEN SOURCE

- **form-keeper** — Chrome extension that restores forms after a reload, files and custom dropdowns included.
- **upgrade-scout** — npm CLI that shows outdated majors and the code that breaks when you upgrade.
- **depbot-policy** — npm CLI: one policy file → dependabot.yml, safe auto-merge and a review rotation.
- **Wird** — React Native (Expo) Quran app: tajweed, 27 reciters, offline audio, Khatam planner and Hifz practice.

EDUCATION

Immersive Fullstack JavaScript Bootcamp — Hacktiv8, Jakarta — 2020 – 2021

Bachelor of Education, English — IKIP PGRI Madiun — 2009 – 2013

TECHNICAL SKILLS

- React, Next.js, TypeScript, Redux, React Query
- Svelte, Vue.js, React Native, Tailwind, SCSS
- Jest, Vitest, Testing Library, Playwright
- Vite, Webpack, ESLint, Husky, SonarQube
- Node.js, Express, Go, C#/.NET, REST APIs
- Gitflow, GitHub Actions, AWS Amplify, Claude Code
